

## SCHEDULE 2 – THE SERVICES

### A. Service Specifications

<b>1. Service name</b>	Specialist Cancer Services (adults) Sub-heading: Hepato-Pancreatic Biliary (HPB) – Pancreatic and Periampullary Cancers
<b>2. Service specification number</b>	2325
<b>3. Date published</b>	September 2024
<b>4. Accountable Commissioner</b>	NHS England – Cancer National Programme of Care (NPOC) <a href="#">NHS commissioning » Cancer (england.nhs.uk)</a> <a href="mailto:england.npoc-cancer@nhs.net">england.npoc-cancer@nhs.net</a>

<b>5.</b>	<b>Population and/or geography to be served</b>
<b>5.1</b>	<b>Population Covered</b>
	<p>This specification (the 'Specification') covers the provision of care for adults who have a suspected or confirmed diagnosis of Hepato-Pancreatic Biliary (HPB) cancer and who require assessment, management and specialist interventions delivered by the Specialist Hepato-Pancreatic Biliary (HPB) Cancer Service (the 'Service').</p> <p>HPB cancers include malignant diseases of the liver, bile duct and pancreas. This specification relates specifically to the curative and palliative treatment of pancreatic and periampullary cancers. The curative and palliative treatment of primary liver, secondary liver, perihilar biliary tract and gallbladder cancers is detailed in another NHS England service specification and these cancers are therefore excluded from this Specification.</p> <p>National standards relating to the delivery of SACT, radiotherapy and PET-CT for HPB cancers are set out within standalone service specifications (section 7.6) and do not form part of this Specification.</p>
<b>5.2</b>	<b>Minimum population size</b>
	<p>The Service must be configured so that there is sufficient volume to ensure workforce sustainability and maintain professional expertise. Patients should be drawn from catchment areas with populations of two to four million; teams with a population base of 2 million could expect to receive at least 200 new referrals per year for patients who may require specialist treatment (<a href="#">Improving Outcomes in Upper Gastro-intestinal Cancers, Department of Health. 2001</a>).</p> <p>There should be an annual team case throughput of at least 80 pancreatic surgical procedures for neoplastic disease or suspected neoplastic disease (<a href="#">National Peer Review Programme HPB Cancer Measures, NHS. 2013</a>).</p>

6.	Service aims and outcomes																													
6.1	Service aims																													
	<p>The aim of the Service is to:</p> <ul style="list-style-type: none"><li>• Deliver high quality clinical care and holistic support to Service Users in a culturally appropriate way.</li><li>• Improve the clinical outcomes, quality of life and experiences of people affected by pancreatic and periampullary cancers.</li><li>• Ensure that there is equity of access for all elements of the service and comparable clinical outcomes for all Service Users.</li><li>• Support and advise all professional groups within the system to offer care closer to home whenever it is clinically appropriate to do so; and</li><li>• Participate in clinical trials and research relating to pancreatic and periampullary cancers.</li></ul>																													
6.2	Outcomes																													
	<p><u>NHS Outcomes Framework Domains &amp; Indicators</u></p> <table><tr><td>Domain 1</td><td>Preventing people from dying prematurely</td><td>Y</td></tr><tr><td>Domain 2</td><td>Enhancing quality of life for people with long-term conditions</td><td>Y</td></tr><tr><td>Domain 3</td><td>Helping people to recover from episodes of ill-health or following injury</td><td>Y</td></tr><tr><td>Domain 4</td><td>Ensuring people have a positive experience of care</td><td>Y</td></tr><tr><td>Domain 5</td><td>Treating and caring for people in safe environment and protecting them from avoidable harm</td><td>Y</td></tr></table> <p><u>Service defined outcomes/outputs</u></p> <p>The quality of specialised services is monitored through Specialised Services Quality Dashboards (SSQDs), which normally comprise a range of quality outcomes (including clinical outcomes) and quality metrics which are supported by regular data collections. SSQDs are available on NHS England’s website at: <a href="https://www.england.nhs.uk/specialised-commissioning-document-library/">https://www.england.nhs.uk/specialised-commissioning-document-library/</a> .</p> <p>Included in the range of metrics that support understanding of the quality outcomes of this service are:</p> <table><tr><th>Outcome Reference Number</th><th>Domain</th><th>Rationale</th><th>Name of Outcomes/Description</th></tr><tr><td>TBC</td><td>1, 2, 3</td><td>This indicates outcomes from the service through an understanding of mortality rates after surgical intervention</td><td>1 year mortality rates for patients undergoing curative pancreatic resections</td></tr><tr><td>TBC</td><td>1, 3, 5</td><td>This indicates outcomes from the service through an understanding of mortality rates after surgical intervention</td><td>90 day mortality for patients following pancreatic resection</td></tr></table>			Domain 1	Preventing people from dying prematurely	Y	Domain 2	Enhancing quality of life for people with long-term conditions	Y	Domain 3	Helping people to recover from episodes of ill-health or following injury	Y	Domain 4	Ensuring people have a positive experience of care	Y	Domain 5	Treating and caring for people in safe environment and protecting them from avoidable harm	Y	Outcome Reference Number	Domain	Rationale	Name of Outcomes/Description	TBC	1, 2, 3	This indicates outcomes from the service through an understanding of mortality rates after surgical intervention	1 year mortality rates for patients undergoing curative pancreatic resections	TBC	1, 3, 5	This indicates outcomes from the service through an understanding of mortality rates after surgical intervention	90 day mortality for patients following pancreatic resection
Domain 1	Preventing people from dying prematurely	Y																												
Domain 2	Enhancing quality of life for people with long-term conditions	Y																												
Domain 3	Helping people to recover from episodes of ill-health or following injury	Y																												
Domain 4	Ensuring people have a positive experience of care	Y																												
Domain 5	Treating and caring for people in safe environment and protecting them from avoidable harm	Y																												
Outcome Reference Number	Domain	Rationale	Name of Outcomes/Description																											
TBC	1, 2, 3	This indicates outcomes from the service through an understanding of mortality rates after surgical intervention	1 year mortality rates for patients undergoing curative pancreatic resections																											
TBC	1, 3, 5	This indicates outcomes from the service through an understanding of mortality rates after surgical intervention	90 day mortality for patients following pancreatic resection																											

	<p>The service will complete/upload data for all listed quality outcomes and metrics to the national Specialised Services Quality Dashboard (SSQD). The full definition of the quality outcomes and metrics and their descriptions including the numerators and denominators can be accessed at <a href="https://www.england.nhs.uk/commissioning/spec-services/npcrcq/specdashboards/">https://www.england.nhs.uk/commissioning/spec-services/npcrcq/specdashboards/</a></p>
<b>7.</b>	<b>Service description</b>
<b>7.1</b>	<b>Service model</b>
	<p>The Provider is responsible for the delivery of the Service, which under the Hepato-Pancreatic Biliary (HPB) cancers service model means the provision of Level 3 services:</p> <ul style="list-style-type: none"> <li>• <b>Level 1:</b> The diagnostic process: rapid assessment and initial diagnostics for suspected pancreatic or periampullary cancer and referral to the specialist HPB cancer service as per locally agreed Network criteria and guidelines;</li> <li>• <b>Level 2:</b> Local designated cancer service, comprising a multidisciplinary team (MDT) / standalone diagnostic team based in a cancer unit. Responsible for: local care and palliative interventions, in accordance with locally agreed Network policy, for patients for whom specialist treatment is not appropriate; and</li> <li>• <b>Level 3:</b> Specialist HPB cancer service, comprising the specialist multidisciplinary team (sMDT) based in a cancer centre. Responsible for: (i) review of diagnostic tests and planning further diagnostic tests; (ii) specialist treatment and procedures for pancreatic and periampullary cancers; (iii) management of recurrence of pancreatic and periampullary cancers.</li> </ul> <p>The service model requires the Service to work closely with Level 1 and 2 services within the local cancer system to ensure a seamless care pathway for Service Users.</p> <p><b>The Provider must be a member of a Cancer Alliance and ensure that the Service:</b></p> <ul style="list-style-type: none"> <li>• Has a fully constituted sMDT in place to ensure all appropriate treatment options are considered for individual patients.</li> <li>• Operates in accordance with MDT arrangements, referral criteria and pathways, clinical protocols (including acute oncology), network policies (including local surgical policies) and treatment pathways (including palliative care and end of life care) that have been agreed by the relevant Cancer Alliance. This must include clarity about the roles and responsibilities of all providers and partners across the pancreatic and periampullary cancer pathway.</li> <li>• The network arrangements and associated documentation set out above must: <ul style="list-style-type: none"> <li>○ Enable prompt referral of Service Users with suspected or confirmed pancreatic and periampullary cancers to the sMDT from Level 1 and Level 2 providers.</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>○ Include a formal agreement where SACT and radiotherapy treatments are given by other providers. This must require that all treatment decisions are made by the sMDT and establish a mechanism for those providers to report Service User outcomes back to the sMDT.</li> <li>○ Ensure that the Service has clear referral pathways to and from the neuroendocrine sMDT for specialist review and management of Service Users with suspected or confirmed neuroendocrine tumours.</li> <li>○ Confirm whether or not the Service operates in partnership with other Services to provide operational resilience, for example, where mutual aid arrangements are in place.</li> <li>○ Ensure that the Service has access to pathology services to support the management of pancreatic and periampullary cancers, in line with national guidance and policies.</li> <li>○ Ensure that the Service has access to diagnostic and therapeutic endoscopic ultrasound services to support the diagnosis and management of pancreatic and periampullary cancers in line with national guidance and policies.</li> <li>○ Ensure that the Service has access to interventional radiology services to support the diagnosis and management of pancreatic and periampullary cancers in line with national guidance and policies, including 24 hours a day/7 days a week emergency cover.</li> <li>○ Ensure that the Service has effective communication and referral processes with associated hospital and community palliative care and end of life care services (where this is not provided by the specialist centre).</li> </ul> <ul style="list-style-type: none"> <li>● Implements new technologies that are recommended by the National Institute for Health and Care Excellence (NICE) and gives due regard to national clinical guidelines and guidance (See Section 7.9).</li> <li>● Gives due regard to other national guidance, including: relevant rapid cancer diagnostic and assessment pathways, optimal timed pathways (<a href="#">NHS England » Faster diagnosis</a>), personalised care and improving quality of life outcomes (<a href="#">NHS England » Personalised care and improving quality of life outcomes</a>) and elective recovery programmes, such as <a href="#">Outpatient Recovery and Transformation</a>.</li> <li>● Can be accessed by both primary care and secondary care referral.</li> <li>● Is open 24 hours a day, 7 days per week with an on-call rota and senior clinical expertise available to deliver routine and emergency care.</li> <li>● Undertakes continuous monitoring of risk and governance to ensure that clinical treatment is safe and effective.</li> <li>● Has arrangements in place to support groups within the population that are at increased risk of developing HPB cancers to access and benefit from the Service equitably. Such support arrangements may require the Service to work collaboratively with system partners and inequalities leads.</li> <li>● Provides personalised information and appropriate support to enable Service Users to make informed choices about their treatment and to live</li> </ul>
--	---

	<p>well following completion of treatment. This must also include information about travel and other welfare schemes that may be available.</p> <ul style="list-style-type: none"> <li>• Provides each Service User with an agreed recommended treatment pathway. This must either prescribe definitive treatment or outline necessary investigations leading to a final treatment plan.</li> <li>• Undertakes multidisciplinary assessments for each Service User, including holistic needs assessments (clinical, nutritional, physical, and psychological assessment using a validated tool), dementia assessments and clinical frailty scores, at multiple points along the care pathway. These must inform written Personalised Care and Support Plans for each Service User. Where appropriate, this should include referral to clinical support services, education and information, plus referral to other support services.</li> <li>• Has appropriate multi-modal prehabilitation and rehabilitation arrangements and enhanced recovery protocols in place, with services that provide Specialist Dietitians, Physiotherapy, Occupational Therapy and Psychology.</li> <li>• Provides Service Users with access to a 'key worker' - this is normally the Clinical Nurse Specialist (CNS) with expertise in HPB cancers. Service Users must meet their key worker as early as possible within their pathway of care.</li> <li>• Access to Specialist Dietetic services that can provide support on the management of PERT, dietary modification, Enteral Nutrition and Parenteral Nutrition.</li> <li>• Delivers high-quality holistic and personalised care, including all aspects of rehabilitation and living with and beyond cancer, delivered or co-ordinated through the sMDT approach.</li> <li>• Offers the option of Service User initiated follow-up and risk stratified follow-up subsequent to treatment.</li> <li>• Provides long-term surveillance after definitive treatment, ensuring timely access for Service User experiencing late effects or complications following treatment for HPB cancers.</li> <li>• Provides supportive palliative care and end of life care which is delivered in line with National Institute for Health and Care Excellence (NICE) guidance and the relevant quality markers.</li> </ul> <p><b>The Provider must ensure that the MDT:</b></p> <ul style="list-style-type: none"> <li>• Has a single named lead clinician who is a core team member, and nominated persons responsible for:             <ul style="list-style-type: none"> <li>○ Ensuring that recruitment into clinical trials and other well-designed studies is integrated into the function of the multidisciplinary team.</li> <li>○ Ensuring that audits and service developments are undertaken.</li> <li>○ User engagement and information for Service Users and carers.</li> </ul> </li> <li>• Takes overall responsibility for the assessment, treatment planning and management, including taking all treatment decisions, of all referrals to the Service.</li> <li>• Holds weekly meetings to discuss all new and recurrent cases of pancreatic and periampullary cancers, for example after treatment or</li> </ul>
--	--

	<p>progression of the cancer. In making treatment decisions, the sMDT must have all clinical disciplines present (i.e., surgical and oncology), even where oncology treatments may be delivered by different providers.</p> <ul style="list-style-type: none"> <li>• Provides an option for members to participate in the sMDT virtually.</li> <li>• Provides expert management of all elements of the diagnostic pathway for pancreatic and periampullary cancers, utilising the most up to date validated diagnostic tools and knowledge.</li> <li>• Considers referral to genetics services / family history services, as appropriate.</li> <li>• Considers referral to fertility services, as appropriate.</li> <li>• Reviews the pathological, if already agreed with the sMDT, and radiological basis for the diagnosis of pancreatic and periampullary cancers, including those from Level 1 and 2 services where these are referred to the sMDT.</li> <li>• Ensures that for all diagnostic tissue sampling, care is taken where possible to preserve tissue for molecular profiling to investigate for potentially actionable mutations.</li> <li>• Ensures that tissue and blood samples are provided for indicated molecular profiling, genomic and biomarker analysis when recommended.</li> <li>• Provides expert management of those with confirmed pancreatic and periampullary cancers, through the use of the most up-to-date validated diagnostic tools, commissioned clinical protocols and surgical interventions.</li> <li>• Makes recommendations for care at each stage in the Service User's pathway, including: treatment (surgery, radiotherapy, SACT and other localised therapies), dietetic/nutritional support e.g., PERT/enteral or parenteral nutrition, palliative interventions, follow-up, rehabilitation and living with and beyond cancer.</li> </ul>
--	--

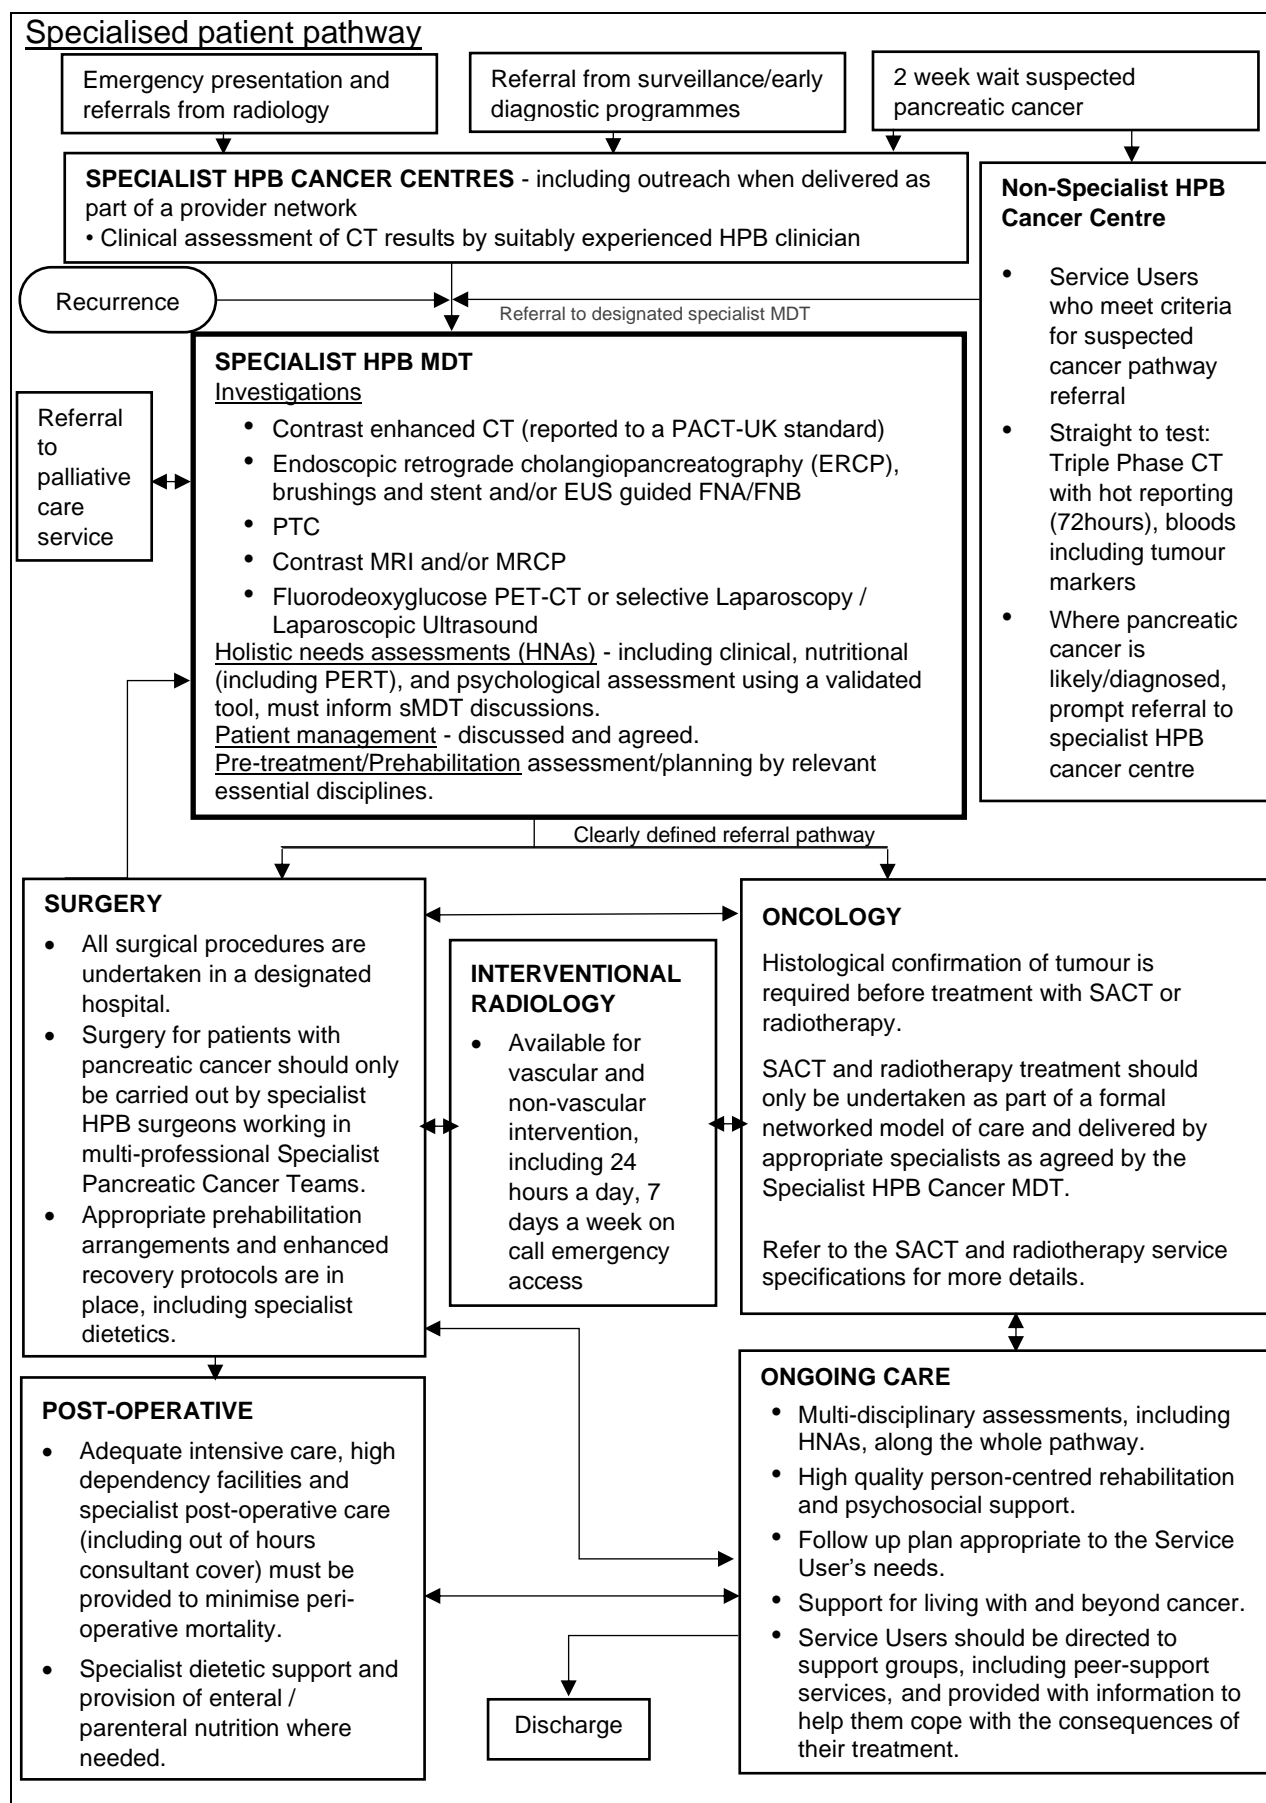

## 7.2 Pathways

### Overall patient pathway

*Note: Some elements of the patient pathway (e.g., diagnostics and rehabilitation) are undertaken outside of the specialist HPB cancer centre. In these circumstances, those elements do not form a part of the specialised service. Activities delivered in the specialist HPB cancer centre form part of the specialised patient pathway as illustrated above.*

<b>7.3</b>	<b>Clinical Networks</b>
	All Providers will be required to participate in a networked model of care to enable services to be delivered as part of a co-ordinated, combined whole system approach.
<b>7.4</b>	<b>Essential Staff Groups</b>
	<p>There should be a single named lead clinician for the specialist service who should also be a core multidisciplinary team member. The Provider should ensure that the Service is able to operate a compliant sMDT with the following essential staff groups:</p> <ul style="list-style-type: none"> <li>• A designated lead clinician (physician or surgeon) who will take overall responsibility for assessment and treatment of patients with pancreatic and periampullary cancers.</li> <li>• Specialist HPB surgeons - these surgeons will also operate on patients with non- malignant disease, since malignancy may not be confirmed until after resection. There should be at least four pancreatic or HPB surgeons within the team.</li> <li>• Gastroenterologists.</li> <li>• Anaesthetists/intensivists.</li> <li>• Radiotherapy specialists (clinical oncologists).</li> <li>• SACT specialists with expertise in the treatment of upper gastrointestinal cancers (medical oncologist or clinical oncologist).</li> <li>• Radiologists with a specific pancreatic and periampullary interest.</li> <li>• Interventional radiologists.</li> <li>• Histopathologists.</li> <li>• Cytopathologists.</li> <li>• Specialist dietitians.</li> <li>• Clinical nurse specialists.</li> <li>• Palliative care and pain management specialists.</li> </ul> <p>At least two members of the team (surgeon, gastroenterologist or radiologist) should be trained in pancreato-biliary endoscopic ultrasonography.</p> <p>All members of the multidisciplinary team should be specialists in the management of pancreatic and periampullary cancer. The number of people required to fulfil each role will depend on the team's workload.</p> <p>A member of the core team nominated as the person responsible for ensuring that recruitment into clinical trials and other well-designed studies is integrated into the function of the sMDT.</p>
<b>7.5</b>	<b>Essential equipment and/or facilities</b>
	<p>The Service must have access to:</p> <ul style="list-style-type: none"> <li>• Remote/networked access to diagnostics and results.</li> <li>• Radiological, pathological, endoscopic and diagnostic facilities to effectively diagnose, classify and stage the condition prior to planning treatment.</li> <li>• Treatment rooms.</li> <li>• Fully staffed operating theatres.</li> </ul>

	<ul style="list-style-type: none"><li>• Fully staffed Interventional Theatre.</li><li>• Fully operational HDU and ITU beds.</li><li>• Appropriate ward/bed capacity.</li><li>• Enhanced recovery unit.</li><li>• Prehabilitation and rehabilitation facilities (inpatient and outpatient).</li><li>• Dietetics service with access to enteral and parenteral nutrition.</li><li>• 24/7 specialist consultant cover.</li></ul>
